KEY ACTIVITIES IN 2020 HIGH-SPEED RAIL WORKSHOP

International Symposium on High-speed Railway and Environment

High-speed rail (HSR) has received growing attention worldwide since its launch in 1964. The system, which is able to run at a speed of 250 km/h or higher, provides a high-quality substitute for short- and medium-distance flights, bus services and driving. HSR is generally considered more energy efficient given it is operated on electricity, and is more sustainable than petroleum-based transportation systems. While many countries, such as France, Germany, Italy, Spain, Japan and China, have already developed interconnected HSR systems at various scales, other countries, such as the United States, India and Malaysia, are still debating whether the gigantic costs of HSR infrastructure development could be offset by the benefits that the system is expected to generate. Many studies have attempted to evaluate the socioeconomic impact of the deployed HSR systems from an ex post perspective. However, there is a lack of understanding of the extent to which the world's now mature HSR infrastructure has affected the environment, energy consumption, and quality of life. Furthermore, the transportation system as a whole is facing considerable challenges to manage its environmental impacts to minimize disruptions to human society and the climate. The increasing amount of destabilizing events, such as extreme weather events, man-made hazards, and technological system failures, have raised concerns about the sustainable operation of HSR systems over the long run. As a result, it becomes essential to have a deeper understanding of the impact that HSR has on the environment so that effective planning and policy strategies could be developed to enhance the resilience of the system and support the goal of sustainable development.

To facilitate the advancement of the study on this important topic and exchange ideas among scholars, an International Symposium on High-speed Rail and Environment is scheduled to be held in Shijiazhuang in September 26 - 27th, 2020.

Host

- The International Association for China Planning (IACP)
- China Highway and Transportation Society (CHRS)
- World Transport Congress Executive Committee (WTC)

Symposium Organizers

- Shijiazhuang Tiedao University
